

Customer Discovery Lessons Learned

1. Articulate why customer discovery conversations are strange.
2. Discuss the problems that this strangeness causes.
3. Discuss how to avoid these problems.
4. Use the Monarch as a case study.

You are ambitious.
You care about your status in your dominance hierarchy.

Customer discovery conversations are strange because:

1. Any status you've earned means nothing to the other person.
- 2.
- 3.

Customer discovery conversations are strange because:

(kind of,
entrepreneurs seem
to get a pass)

- 
1. Any status you've earned means nothing to the other person.
 2. You're trying to make money off of the other person, and they know that.
 - 3.

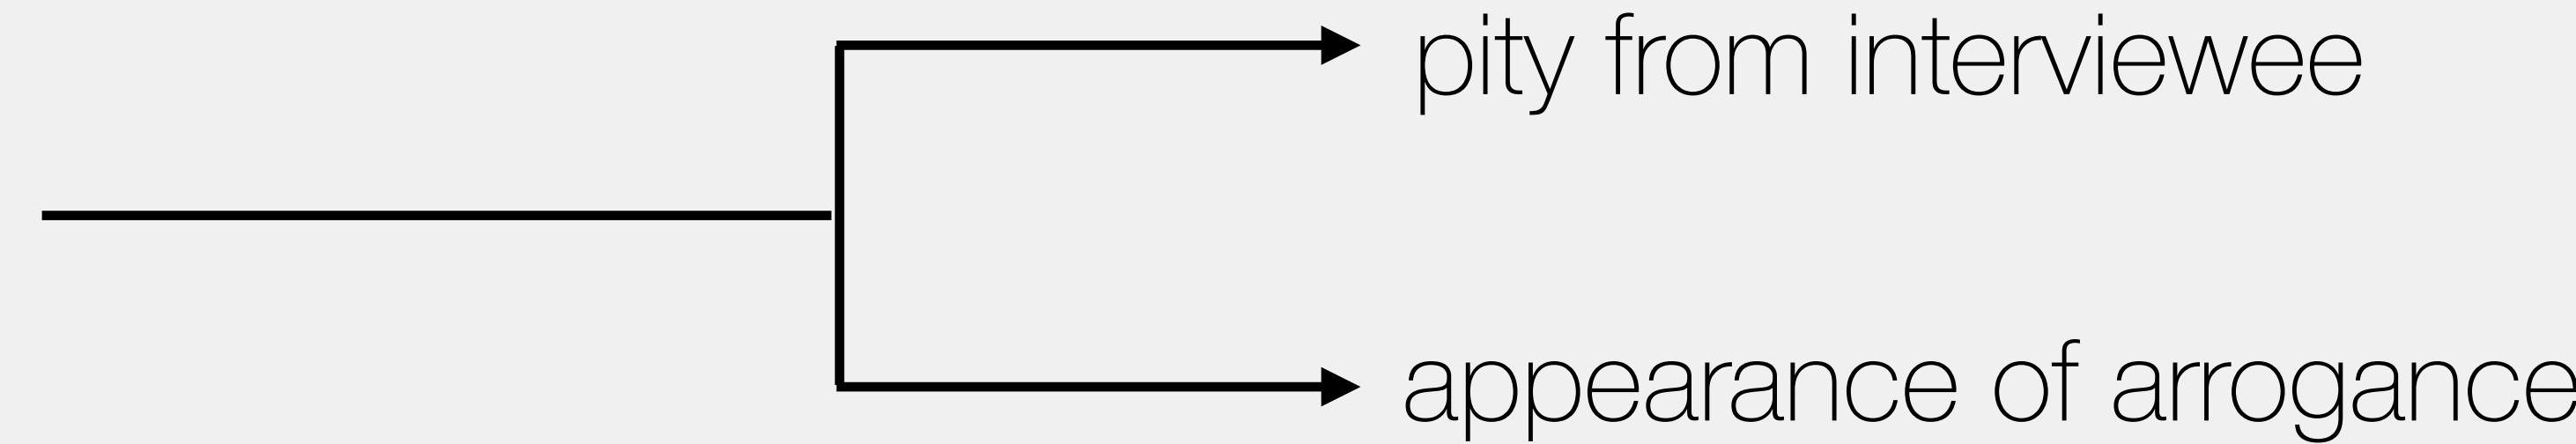

Customer discovery conversations are strange because:

(kind of,
entrepreneurs seem
to get a pass)

- 
1. Any status you've earned means nothing to the other person.
 2. You're trying to make money off of the other person, and they know that.
 3. You cannot ask for the information that you want.

Problems this can cause:

No status

Ambiguity

How do you deal with this?

You'll arrive at your own answer, but here's what worked for me.

Starting the conversation:

1. All the stuff that goes without saying (smiling, not approaching at a sprint, etc.)
 - Don't trigger a prey-animal response.
- 2.
- 3.
- 4.

Starting the conversation

1. All the stuff that can trigger a panic attack (e.g., public speaking at a sprint, etc.)
 - Don't trigger a panic attack
2. "Excuse me, do you mind if I sit next to you? I'm new here and I'm not sure where to sit with something?"
 - Utilizes the Body Scan
- 3.
- 4.

Starting the conversation:

1. All the stuff that goes without saying (smiling, not approaching at a sprint, etc.)
 - Don't trigger a prey-animal response.
2. "Excuse me, my name's Hunter, could you please help me with something?"
 - Utilizes the Ben Franklin effect, let's them demonstrate virtue
- 3.
- 4.

Starting the conversation:

1. All the stuff that goes without saying (smiling, not approaching at a sprint, etc.)
 - Don't trigger a prey-animal response.
2. "Excuse me, my name's Hunter, could you please help me with something?"
 - Utilizes the Ben Franklin effect, let's them demonstrate virtue
3. "I'm an engineer (entrepreneur) and I'm trying to learn about vineyards, but I'm a bit out of my depth."
 - Establish that I exist in a different hierarchy and that this will be an abnormal conversation - a break in routine
 - Suggest through my behavior that I have some status in that hierarchy.
 - Establish humility, and make myself vulnerable, which makes me trustworthy.
- 4.

Starting the conversation:

1. All the stuff that goes without saying (smiling, not approaching at a sprint, etc.)
 - Don't trigger a prey-animal response.
2. "Excuse me, my name's Hunter, could you please help me with something?"
 - Utilizes the Ben Franklin effect, let's them demonstrate virtue
3. "I'm an engineer (entrepreneur) and I'm trying to learn about vineyards, but I'm a bit out of my depth."
 - Establish that I exist in a different hierarchy and that this will be an abnormal conversation.
 - Suggest through my behavior that I have some status in that hierarchy.
 - Establish humility, and make myself vulnerable, which makes me trustworthy.
4. "I've been trying to speak with industry experts like yourself to learn a bit about how folks do what they do. Could I borrow a few minutes of your time?"
 - Elevates them to hero status.
 - Elevates their mundane daily activity to something mysterious and interesting
 - Suggests that others have turned me away, giving them the opportunity to be a good representative for their occupation

Starting the conversation:

1. All the stuff that goes without saying (smiling, not approaching at a sprint, etc.)
• Do they have any animals?
2. “Excuse me, my name’s Hunter, could you please help me with something?”
• Utilizes the Ben Franklin effect, let’s them demonstrate virtue
3. “I’m an engineer (entrepreneur) and I’m trying to learn about vineyards, but I’m a bit out of my depth.”
• **without appearing arrogant.**
• **without appearing pitiful.**
• **that elevates them and their routine to hero status.**
 - Establish that I exist in a different hierarchy and that this will be an abnormal conversation.
 - Suggest through my behavior that I have some status in that hierarchy.
 - Establish humility, and make myself vulnerable, which makes me trustworthy.
4. “I’ve been trying to speak with industry experts like yourself to learn a bit about how folks do what they do. Could I borrow a few minutes of your time?”

The challenge now is to hold that conversation.

- Elevates them to hero status.
- Elevates their mundane daily activity to something mysterious and interesting
- Suggests that others have turned me away, giving them the opportunity to be a good representative for their occupation

Maintaining the conversation:

1. “Can you tell me about the most significant threat to your grapes last season?”
 - Immediately elicits a story.
 - Starts the conversation in a way that makes it hard to predict the direction that it will take.
- 2.
- 3.
- 4.

Articulate a specific, quantifiable, verifiable hypothesis

Ask a high-level, story-eliciting question

Maintaining the conversation:

1. “Can you tell me about the most significant threat to your grapes last season?”

- Immediately elicits a story.
- Starts the conversation in a way that makes it hard to predict the direction that it will take.

2.

3.

Ask a question based on something specific *that they said* that moves you toward the hypothesis.

4.

Confirm or reject hypothesis.

Maintaining the conversation:

1. “Can you tell me about the most significant threat to your grapes last season?”
 - Immediately elicits a story.
 - Starts the conversation in a way that makes it hard to predict the direction that it will take.
2. Play the hypothesis-testing game until hypothesis is confirmed or rejected.
- 3.
- 4.

Maintaining the conversation:

1. “Can you tell me about the most significant threat to your grapes last season?”
 - Immediately elicits a story.
 - Starts the conversation in a way that makes it hard to predict the direction that it will take.
2. Play the hypothesis-testing game until hypothesis is confirmed or rejected.
3. “Thank you so much, this has been really, really helpful. I appreciate you taking the time. Would you mind if I reached out in the future, perhaps through email, if I have any more simple questions?”
 - Almost too gracious.
 - Opens a new relationship.
- 4.

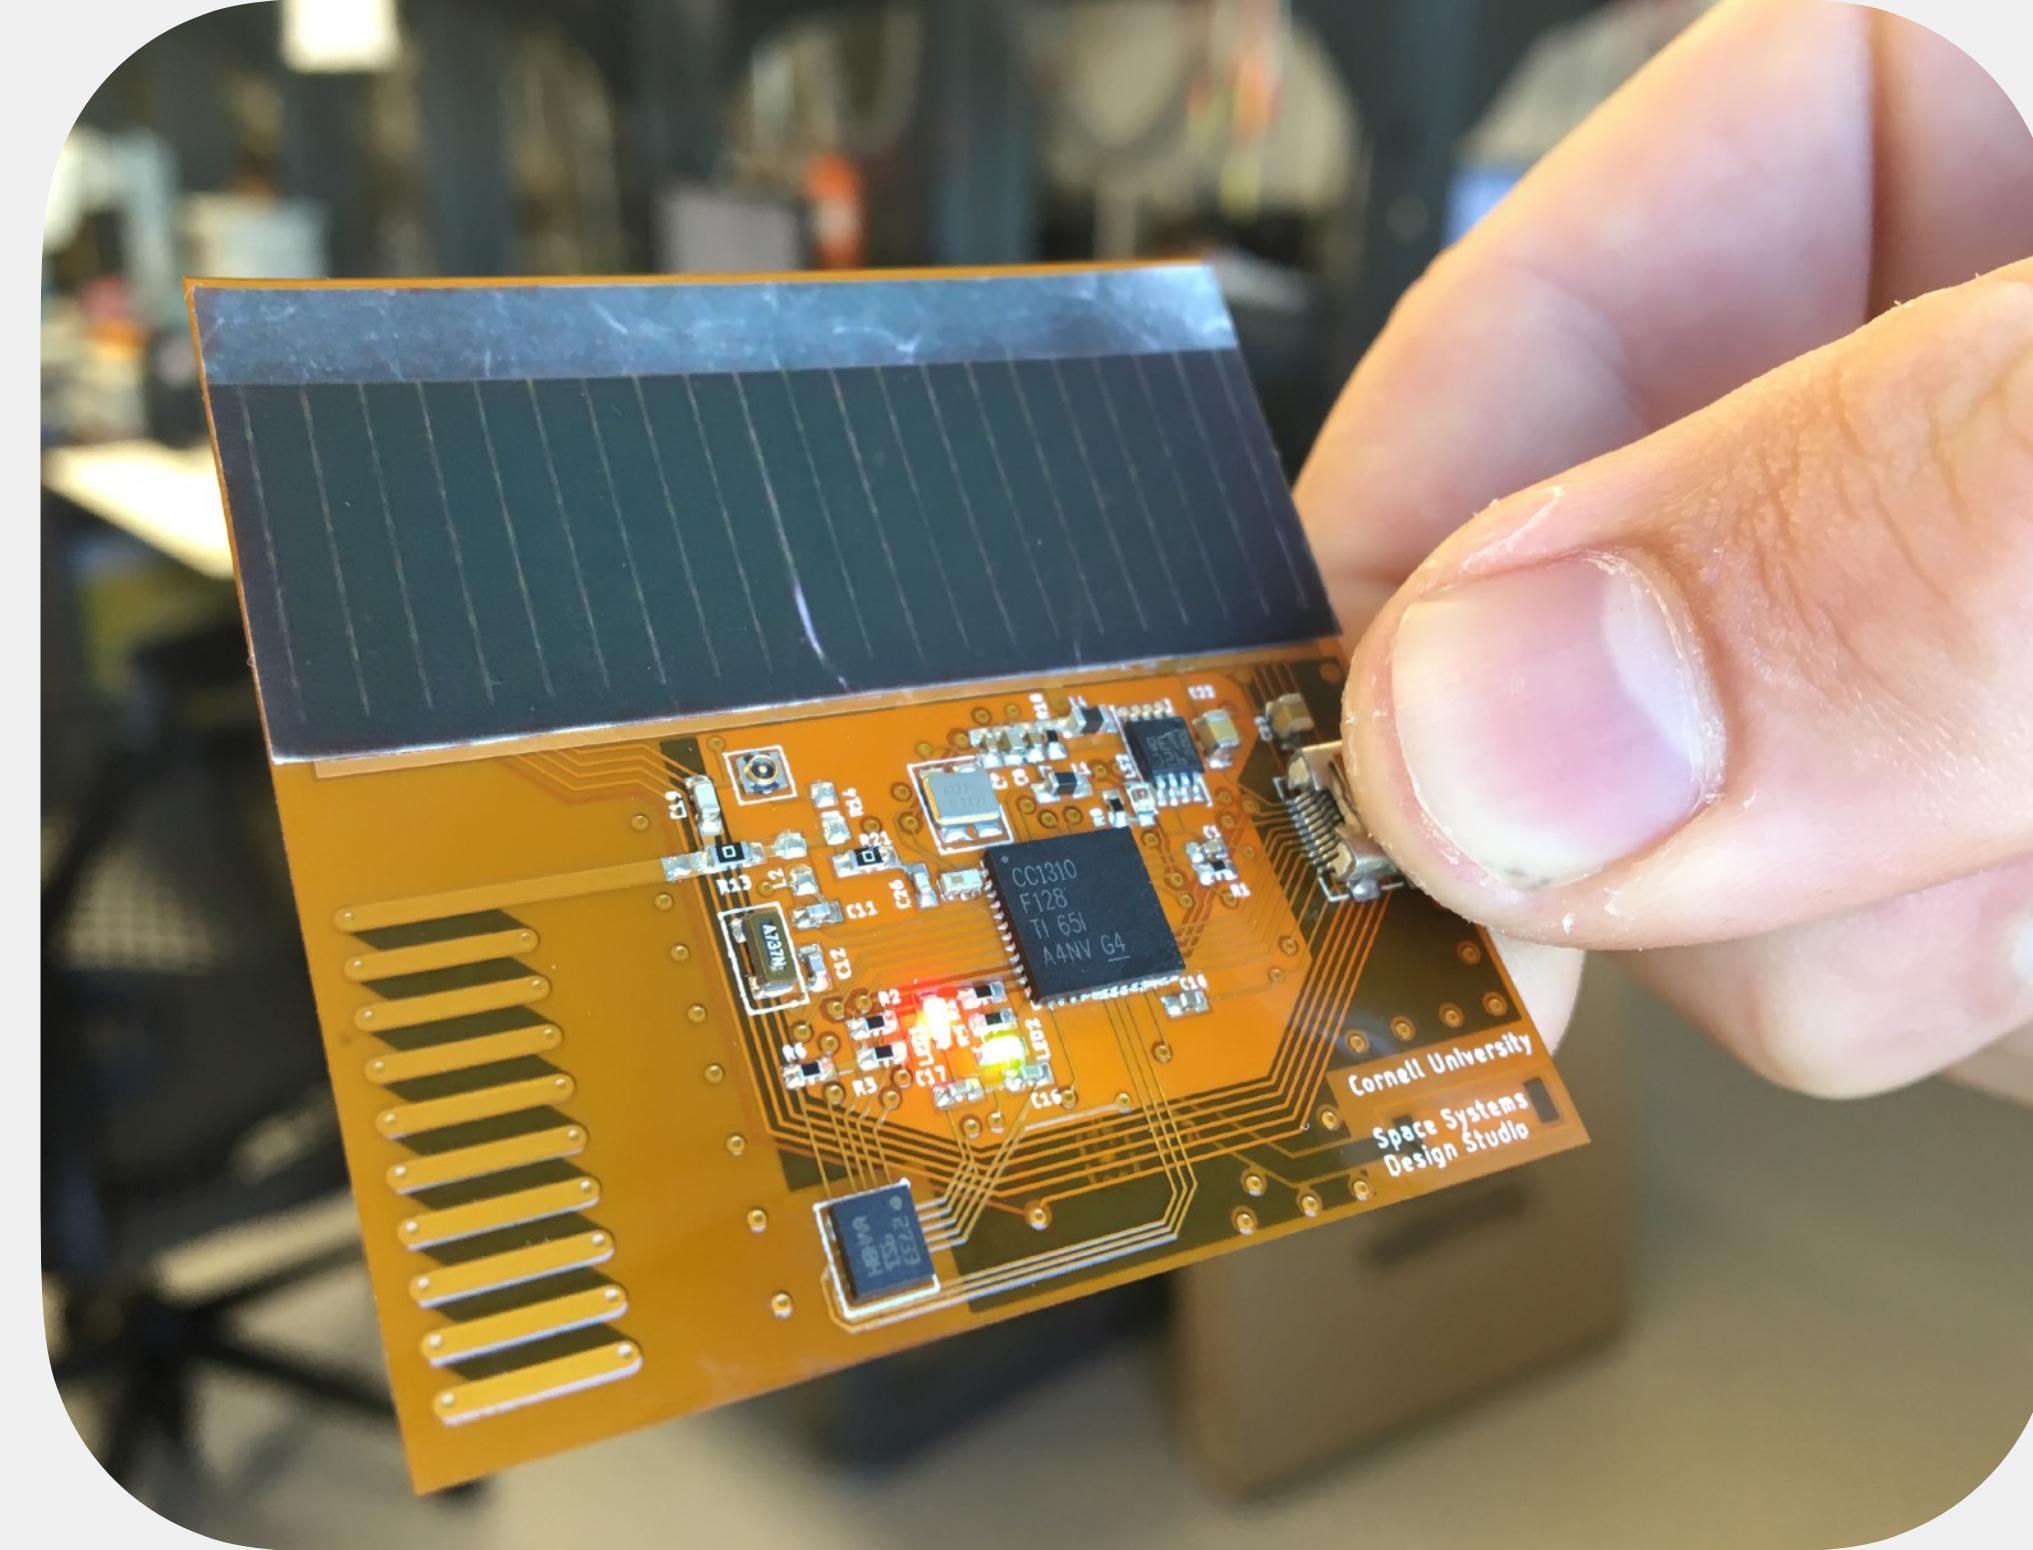

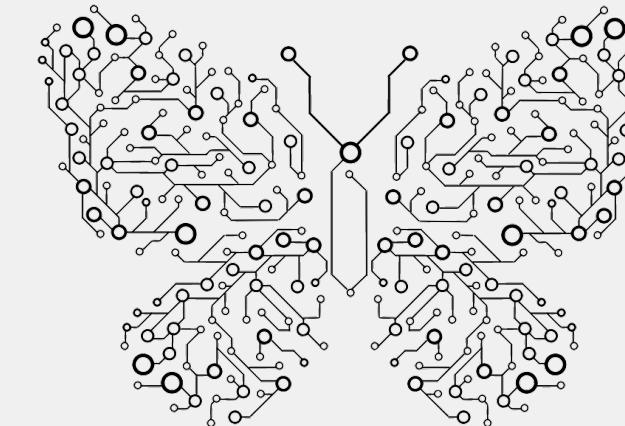

Maintaining the conversation:

1. “Can you tell me about the most significant threat to your grapes last season?”
 - Immediately elicits a story.
 - Starts the conversation in a way that makes it hard to predict the direction that it will take.
2. Play the hypothesis-testing game until hypothesis is confirmed or rejected.
3. “Thank you so much, this has been really, really helpful. I appreciate you taking the time. Would you mind if I reached out in the future, perhaps through email, if I have any more simple questions?”
 - Almost too gracious.
 - Opens a new relationship.
4. “Is there anyone else that you can think of that would be good for me to contact?”

The whole process, abstracted:

1. Behave like a properly socialized human being.
 - Don't trigger a prey-animal response.
2. Ask for help or a favor.
 - Utilizes the Ben Franklin effect
 - Let's them demonstrate virtue
3. Establish that you're from a different dominance hierarchy, and let your demeanor suggest some status within that hierarchy.
 - Makes it clear that this conversation will be a break in their routine.
4. Show humility and vulnerability
 - Makes you trustworthy
5. Elevate them and their routine to hero status
6. Elicit a story
7. Form follow-up questions based on specific things that they said.
8. Be almost too grateful, provide a means of continuing the conversation, and ask for contacts.

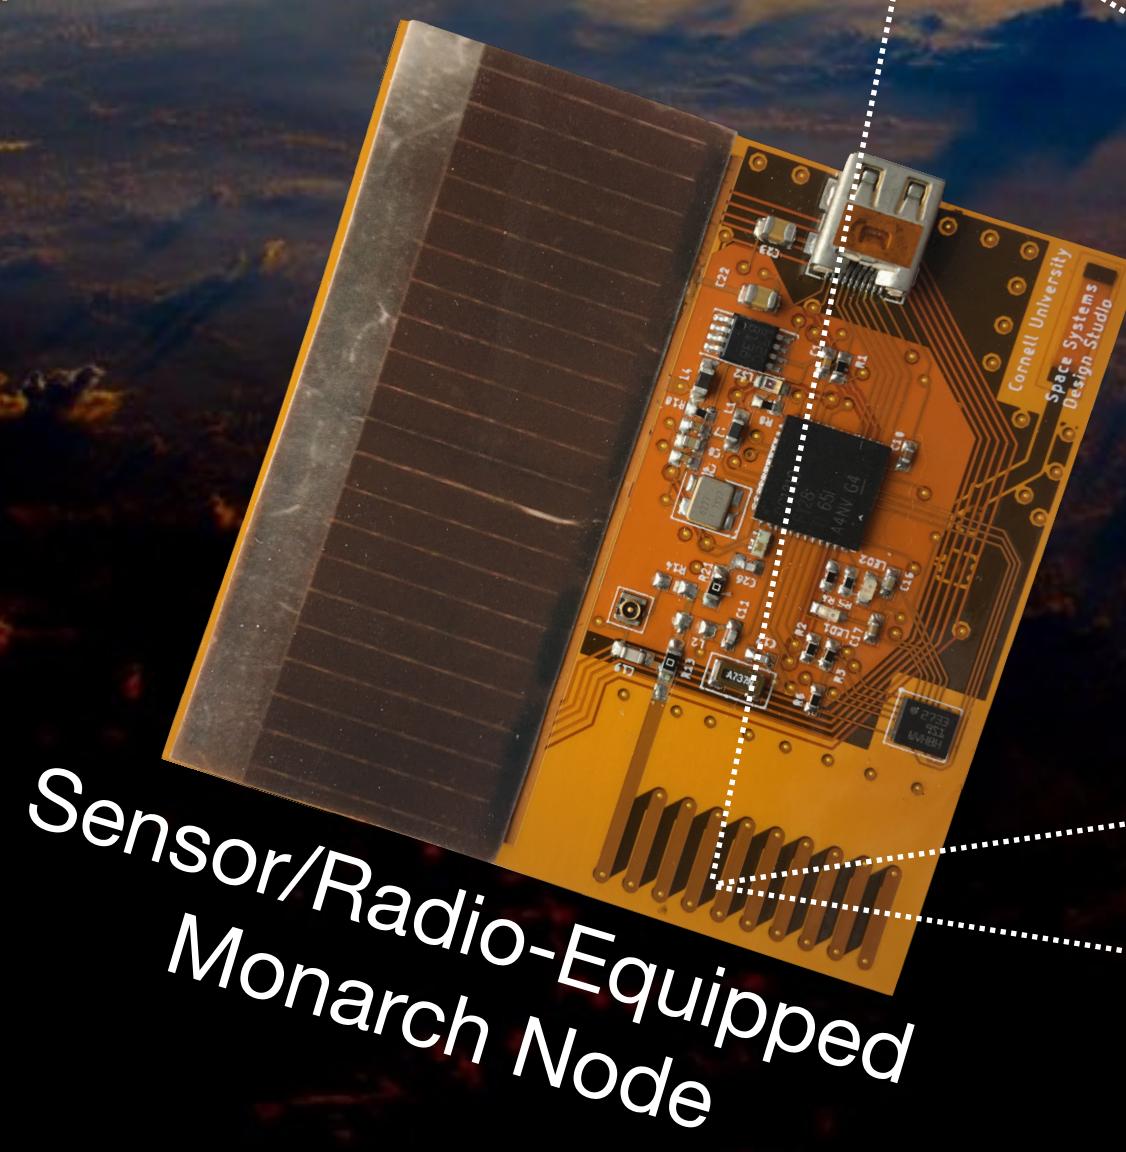

Monarch

A device that enables cool-climate vineyard managers to take preventative action against wine grape loss to frost and fungus by providing realtime, in-canopy temperature and humidity data.

Markets Considered

Long story short . . .

Monarchs gather data that enable cool-climate vineyard managers to take preventative action against wine grape loss to frost and fungus by providing realtime, in-canopy temperature, humidity, and wetness data.

Hunter Adams

PhD candidate in aerospace engineering at Cornell University, focused on low-power electronic systems, online state estimation, and multi-agent systems.

Mason Peck

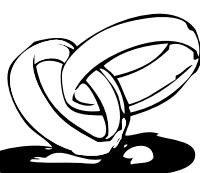

Professor of mechanical and aerospace engineering at Cornell University, former CTO of NASA.

Justine Vanden Heuvel

Professor of viticulture,
Cornell University

Key Partners

- Texas Instruments
- Alta Devices
- SkyTraq
- Board fabrication house
- Board assembly house

Key Activities

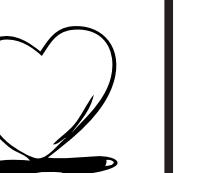

- Electronics prototyping
- Printed circuit board design
- Hardware installation and maintenance

Value Propositions

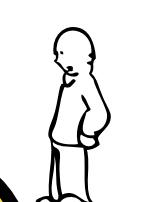

- Improve the quality and prevent loss of wine grapes by enabling higher resolution maintenance of vineyards, as opposed to the standard practice of treating all grapes on a vineyard identically.

Customer Relationships

- Free hardware installation and trial period
- Maintenance & updates
- Incentivize data sharing

Customer Segments

- Vineyard managers at cool-climate vineyards (end user).

Key Resources

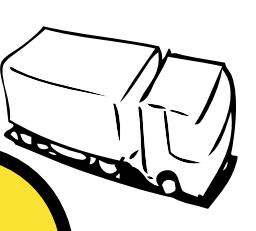

- IP over a critical aspect of the system
- Electronics prototyping facility
- Humans

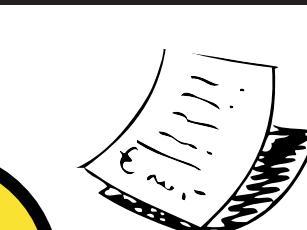

- Decrease the number of fungicide sprays per season at cool-climate vineyards (*in anticipation of regulation*).

Channels

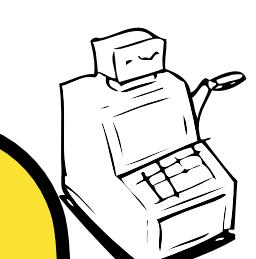

- Trade shows (in particular Unified Wine and Grape Symposium)

Cost Structure

- Printed circuit board fabrication and assembly
- Receiver station fabrication, assembly, and installation
- Facilities costs
- Human beings

Revenue Streams

- Hardware leases by vineyards
- Data monetization through a subscription service

How do we provide post purchase customer support?

Cost Structure

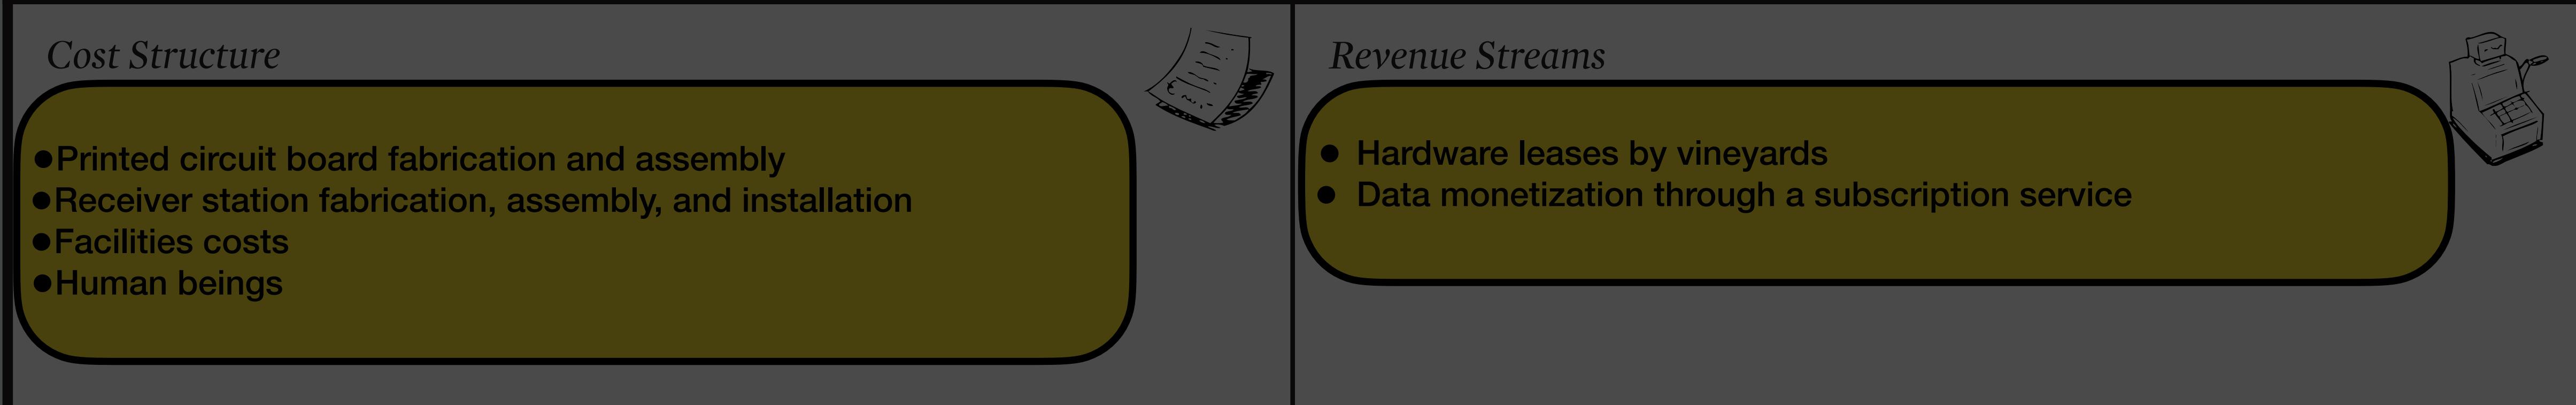

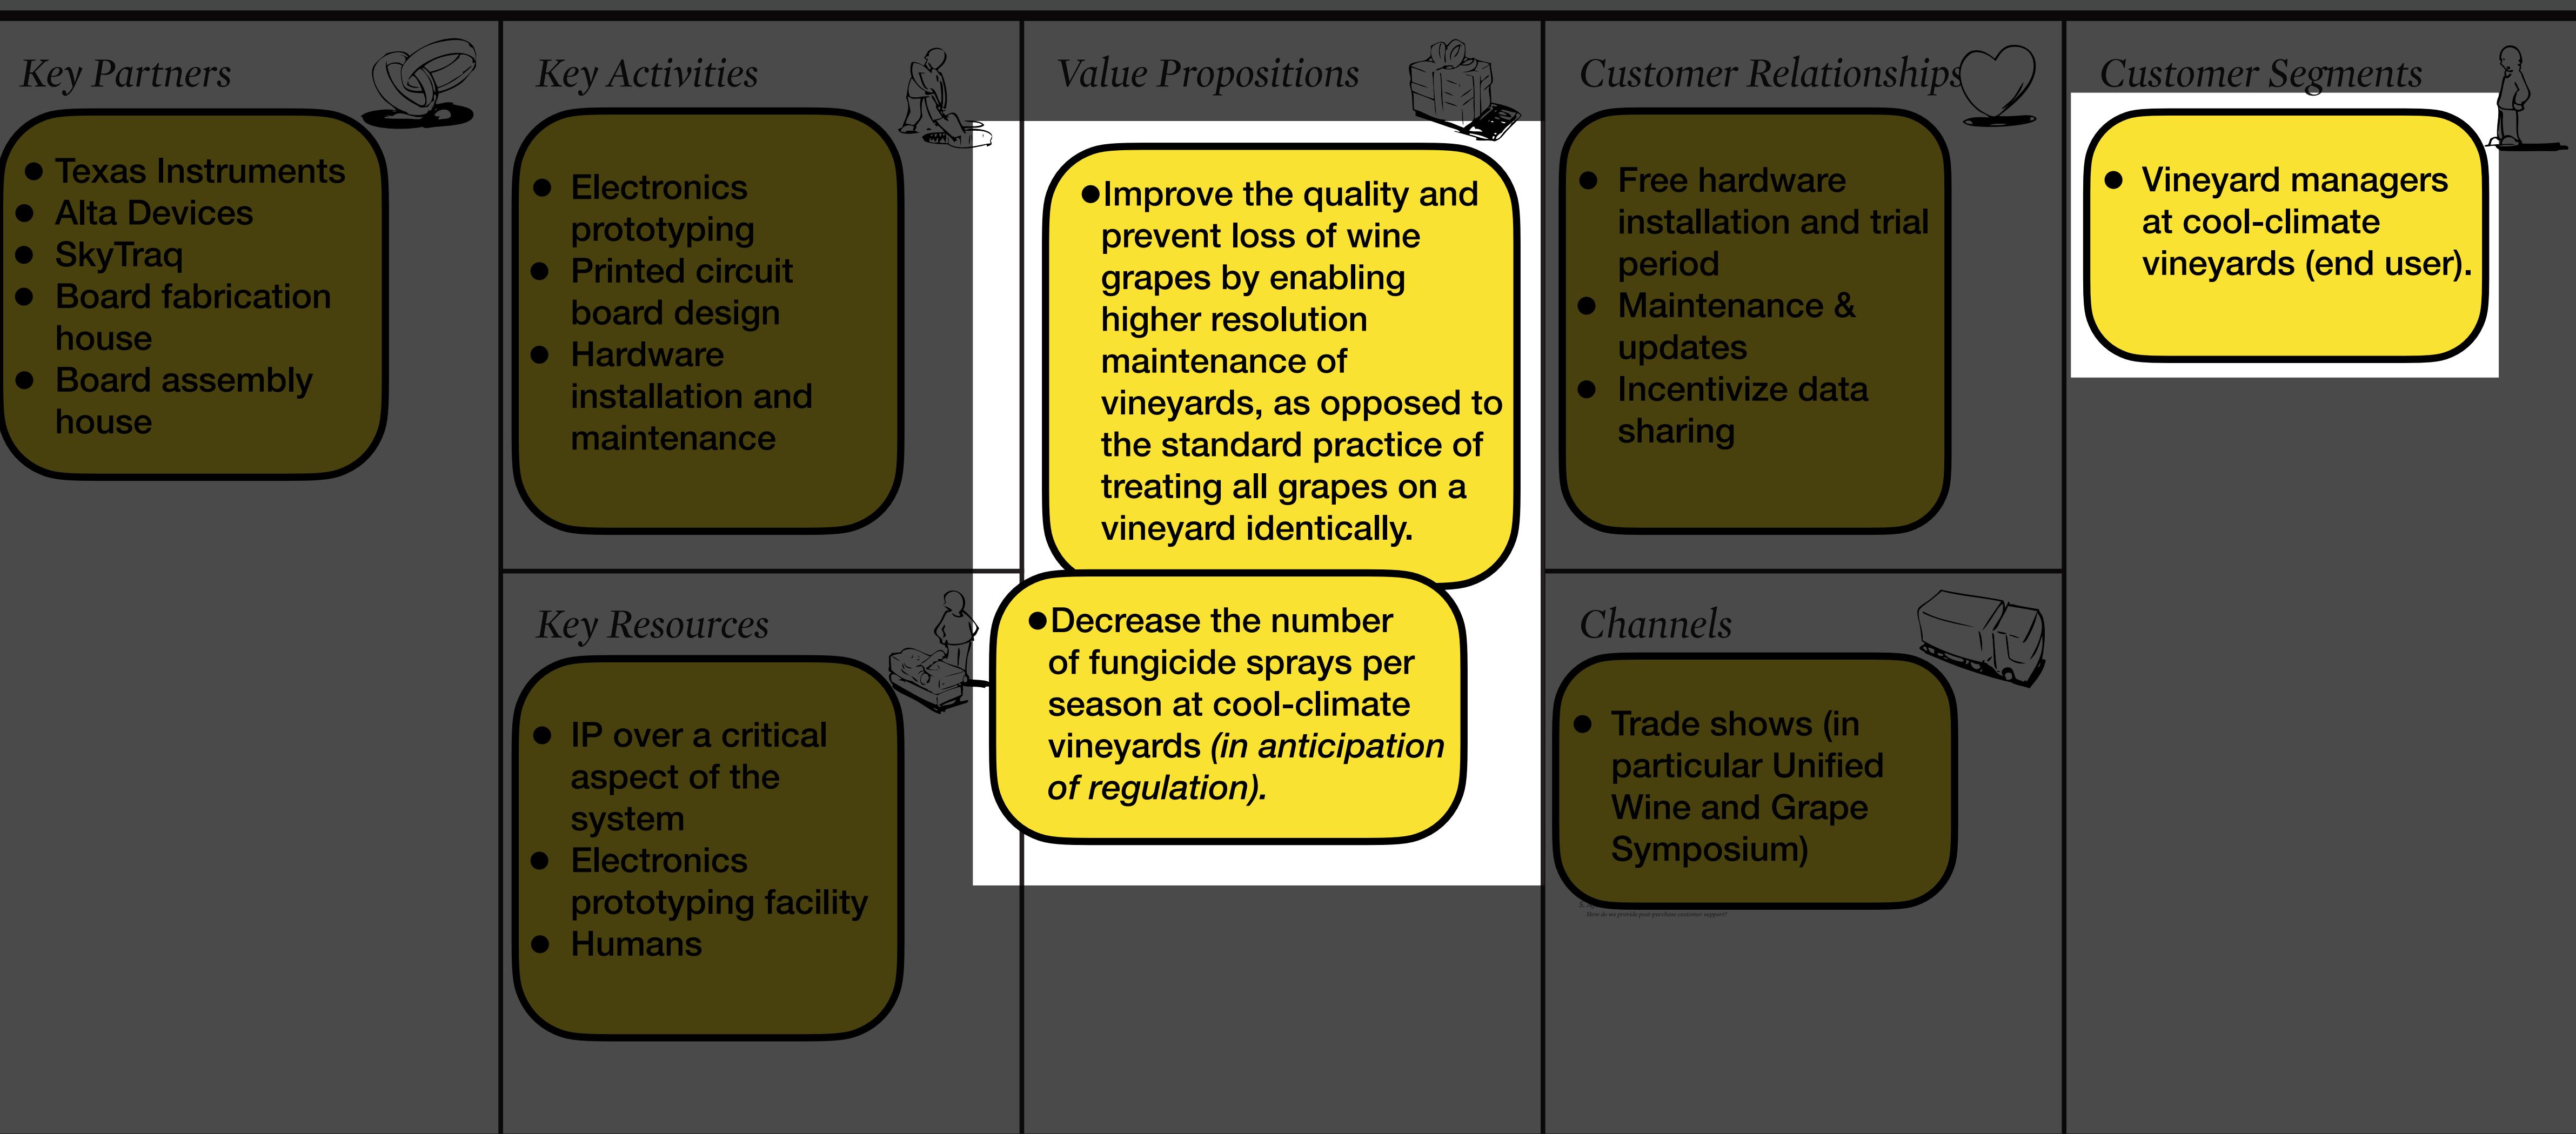

- Printed circuit board fabrication and assembly
- Receiver station fabrication, assembly, and installation
- Facilities costs
- Human beings

Revenue Streams

- Hardware leases by vineyards
- Data monetization through a subscription service

Hobbes Vineyard

\$2k weather station over here

Seneca Lake

Variable precipitation/
environmental conditions

Steep slope,
highly variable microclimate

No in-vineyard
sensing equipment

Value Propositions

Decrease number of fungicide sprays per season (decreases labor/cost)

Improve quality of wine grapes (increasing selling price)

Decrease loss of wine grapes

Reduce wine disturbance during analysis

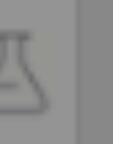

Improve wine marketability to sustainability conscious consumers

Improve leaf management, thereby preventing sun damage to wine grapes

Deter birds from vineyards

Improve sustainability score of vineyard to make new retailers available for sales (e.g. Whole ...)

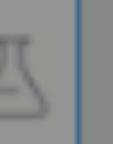

Provide additional vineyard data to winemakers making grape purchasing decisions

Provide plant-level soil moisture measurements to decrease water usage during irrigation

Provide temperature data across a vineyard to prevent frost damage by letting vineyard ...

Customer Relationships

Free hardware installation and trial period

Maintenance & updates

Incentivize data sharing

Channels

Trade shows (in particular Unified Wine and Grape Symposium)

Online purchasing

On-site installation

Direct Sales

Customer Segments

Vineyard managers at cool climate vineyards (end user)

Data scientists at large California vineyards (like Scheid)

Winemakers (end user)

Winemaker agents (influencers)

Vineyard managers at warm-climate vineyards (end user)

Wine brokers (influencer)

South African vineyard managers

Academic Extension Programs (influencers)

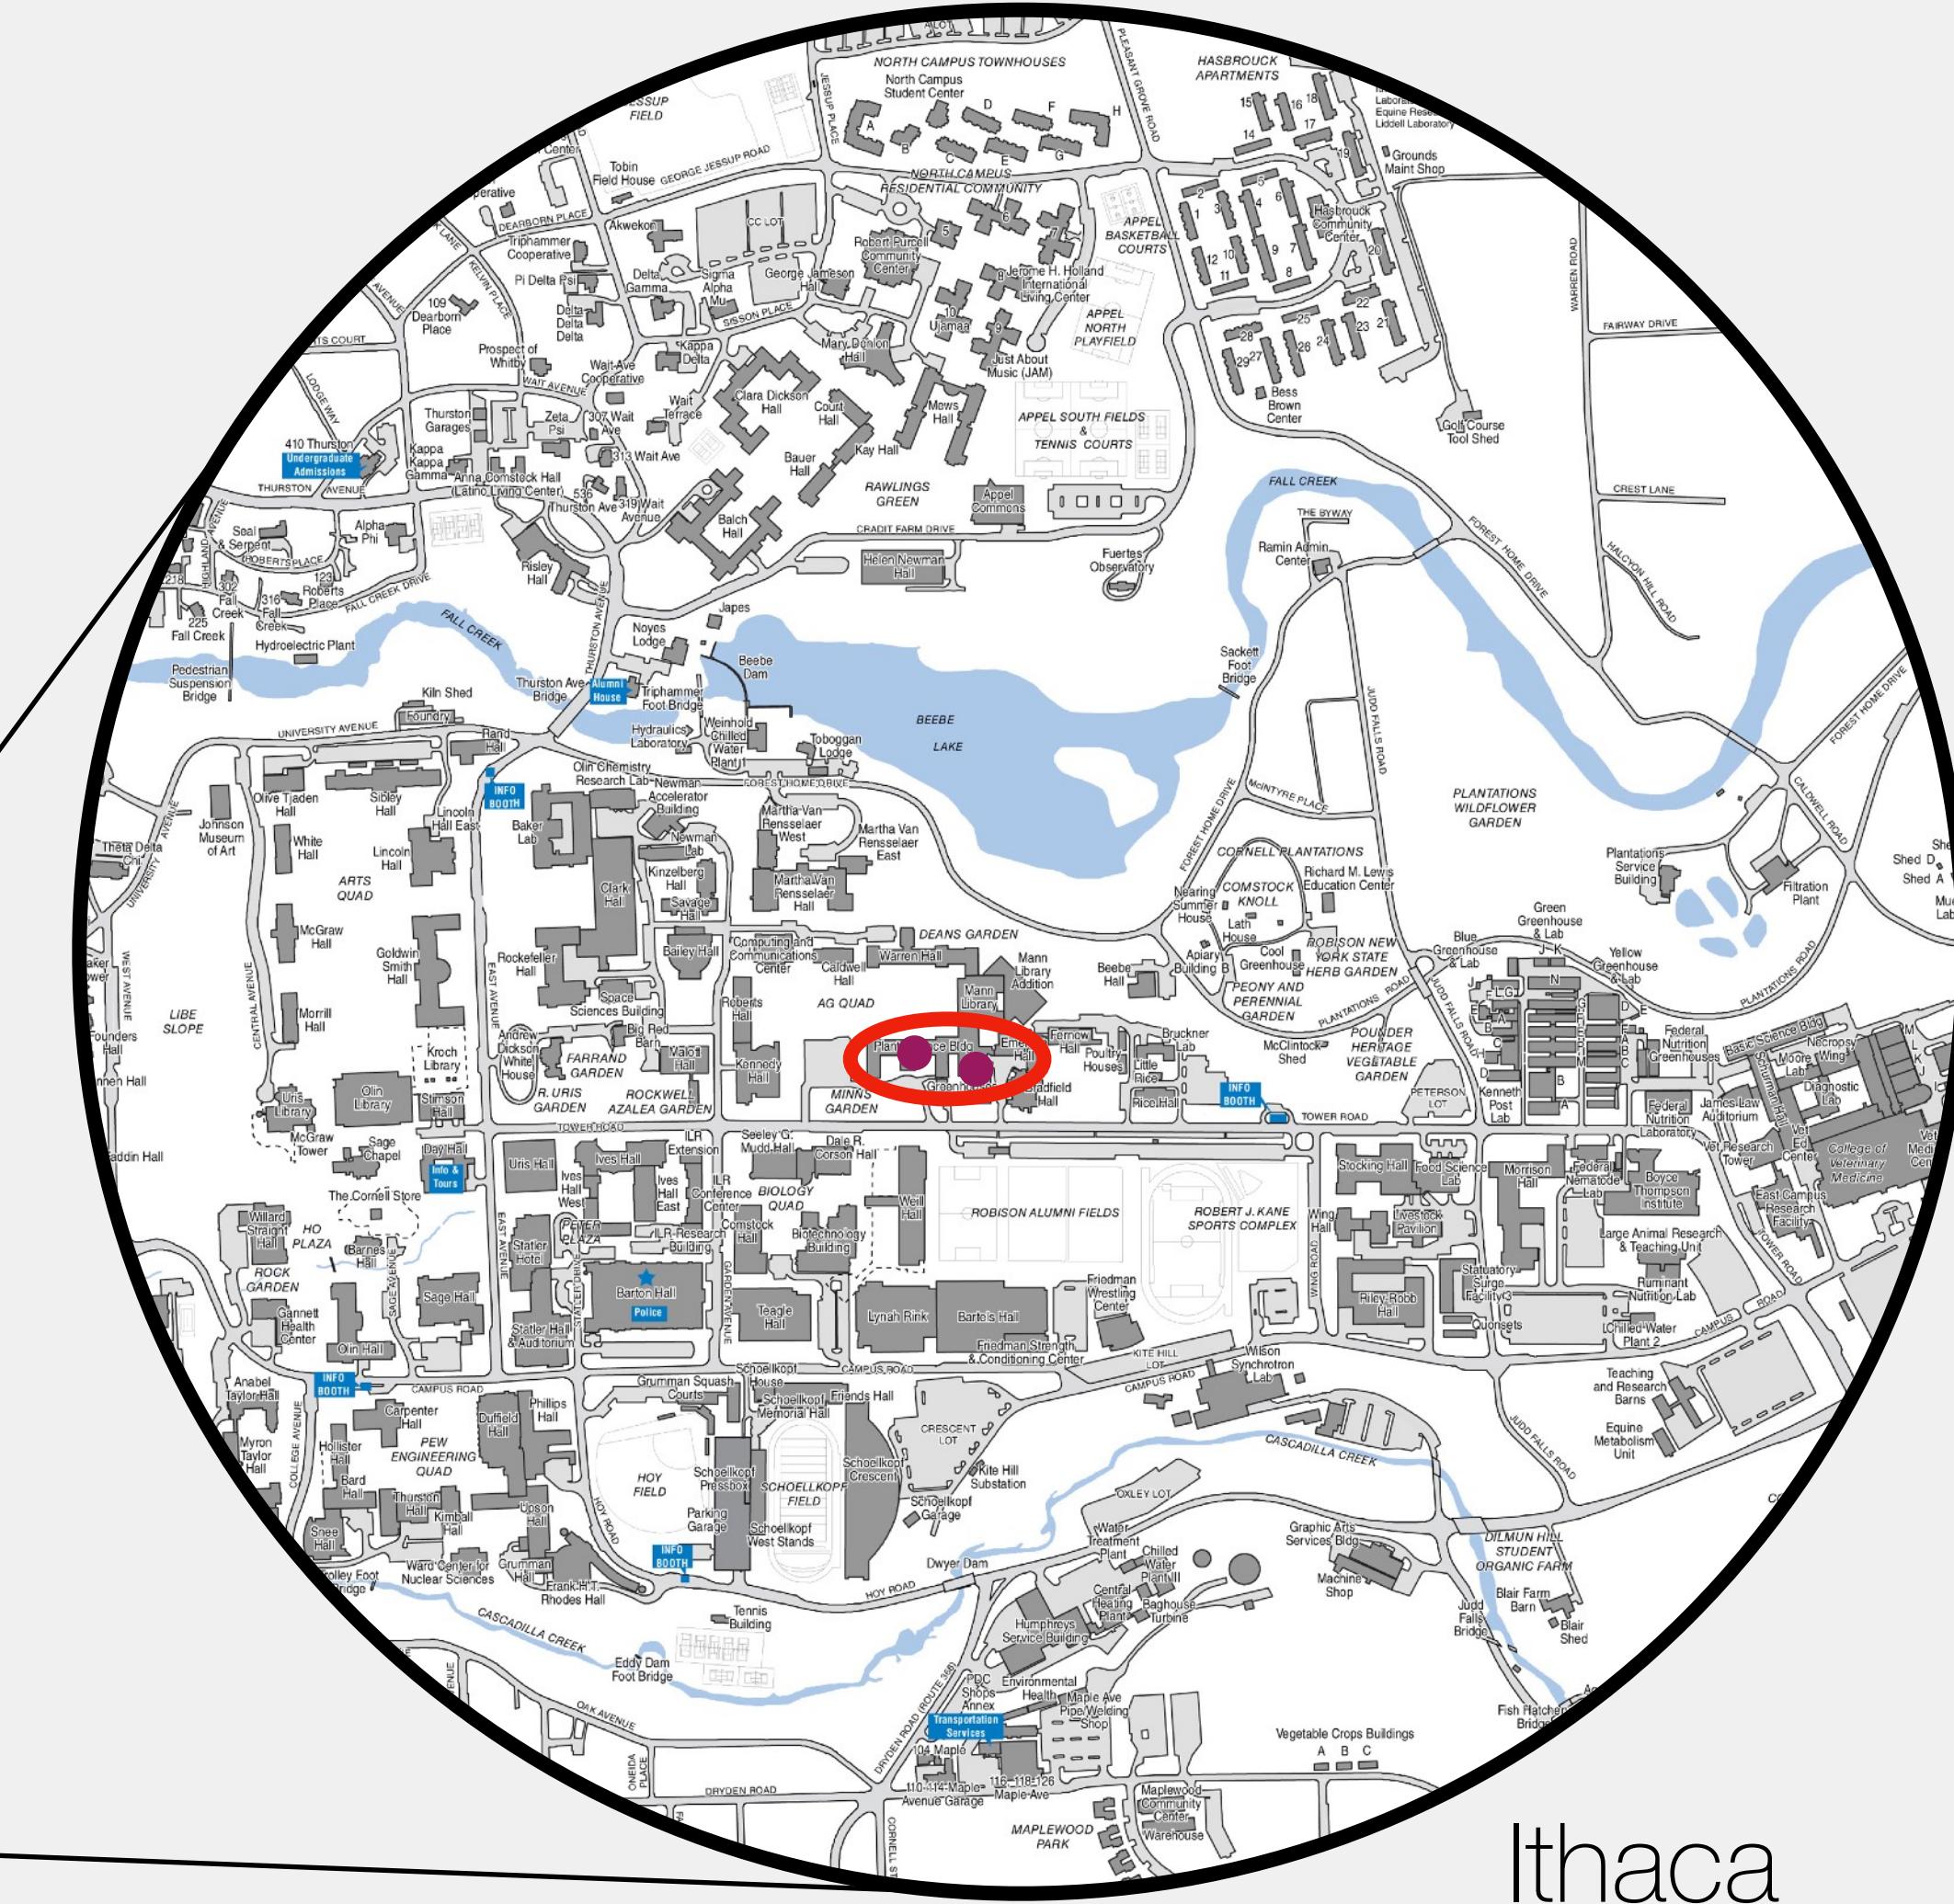

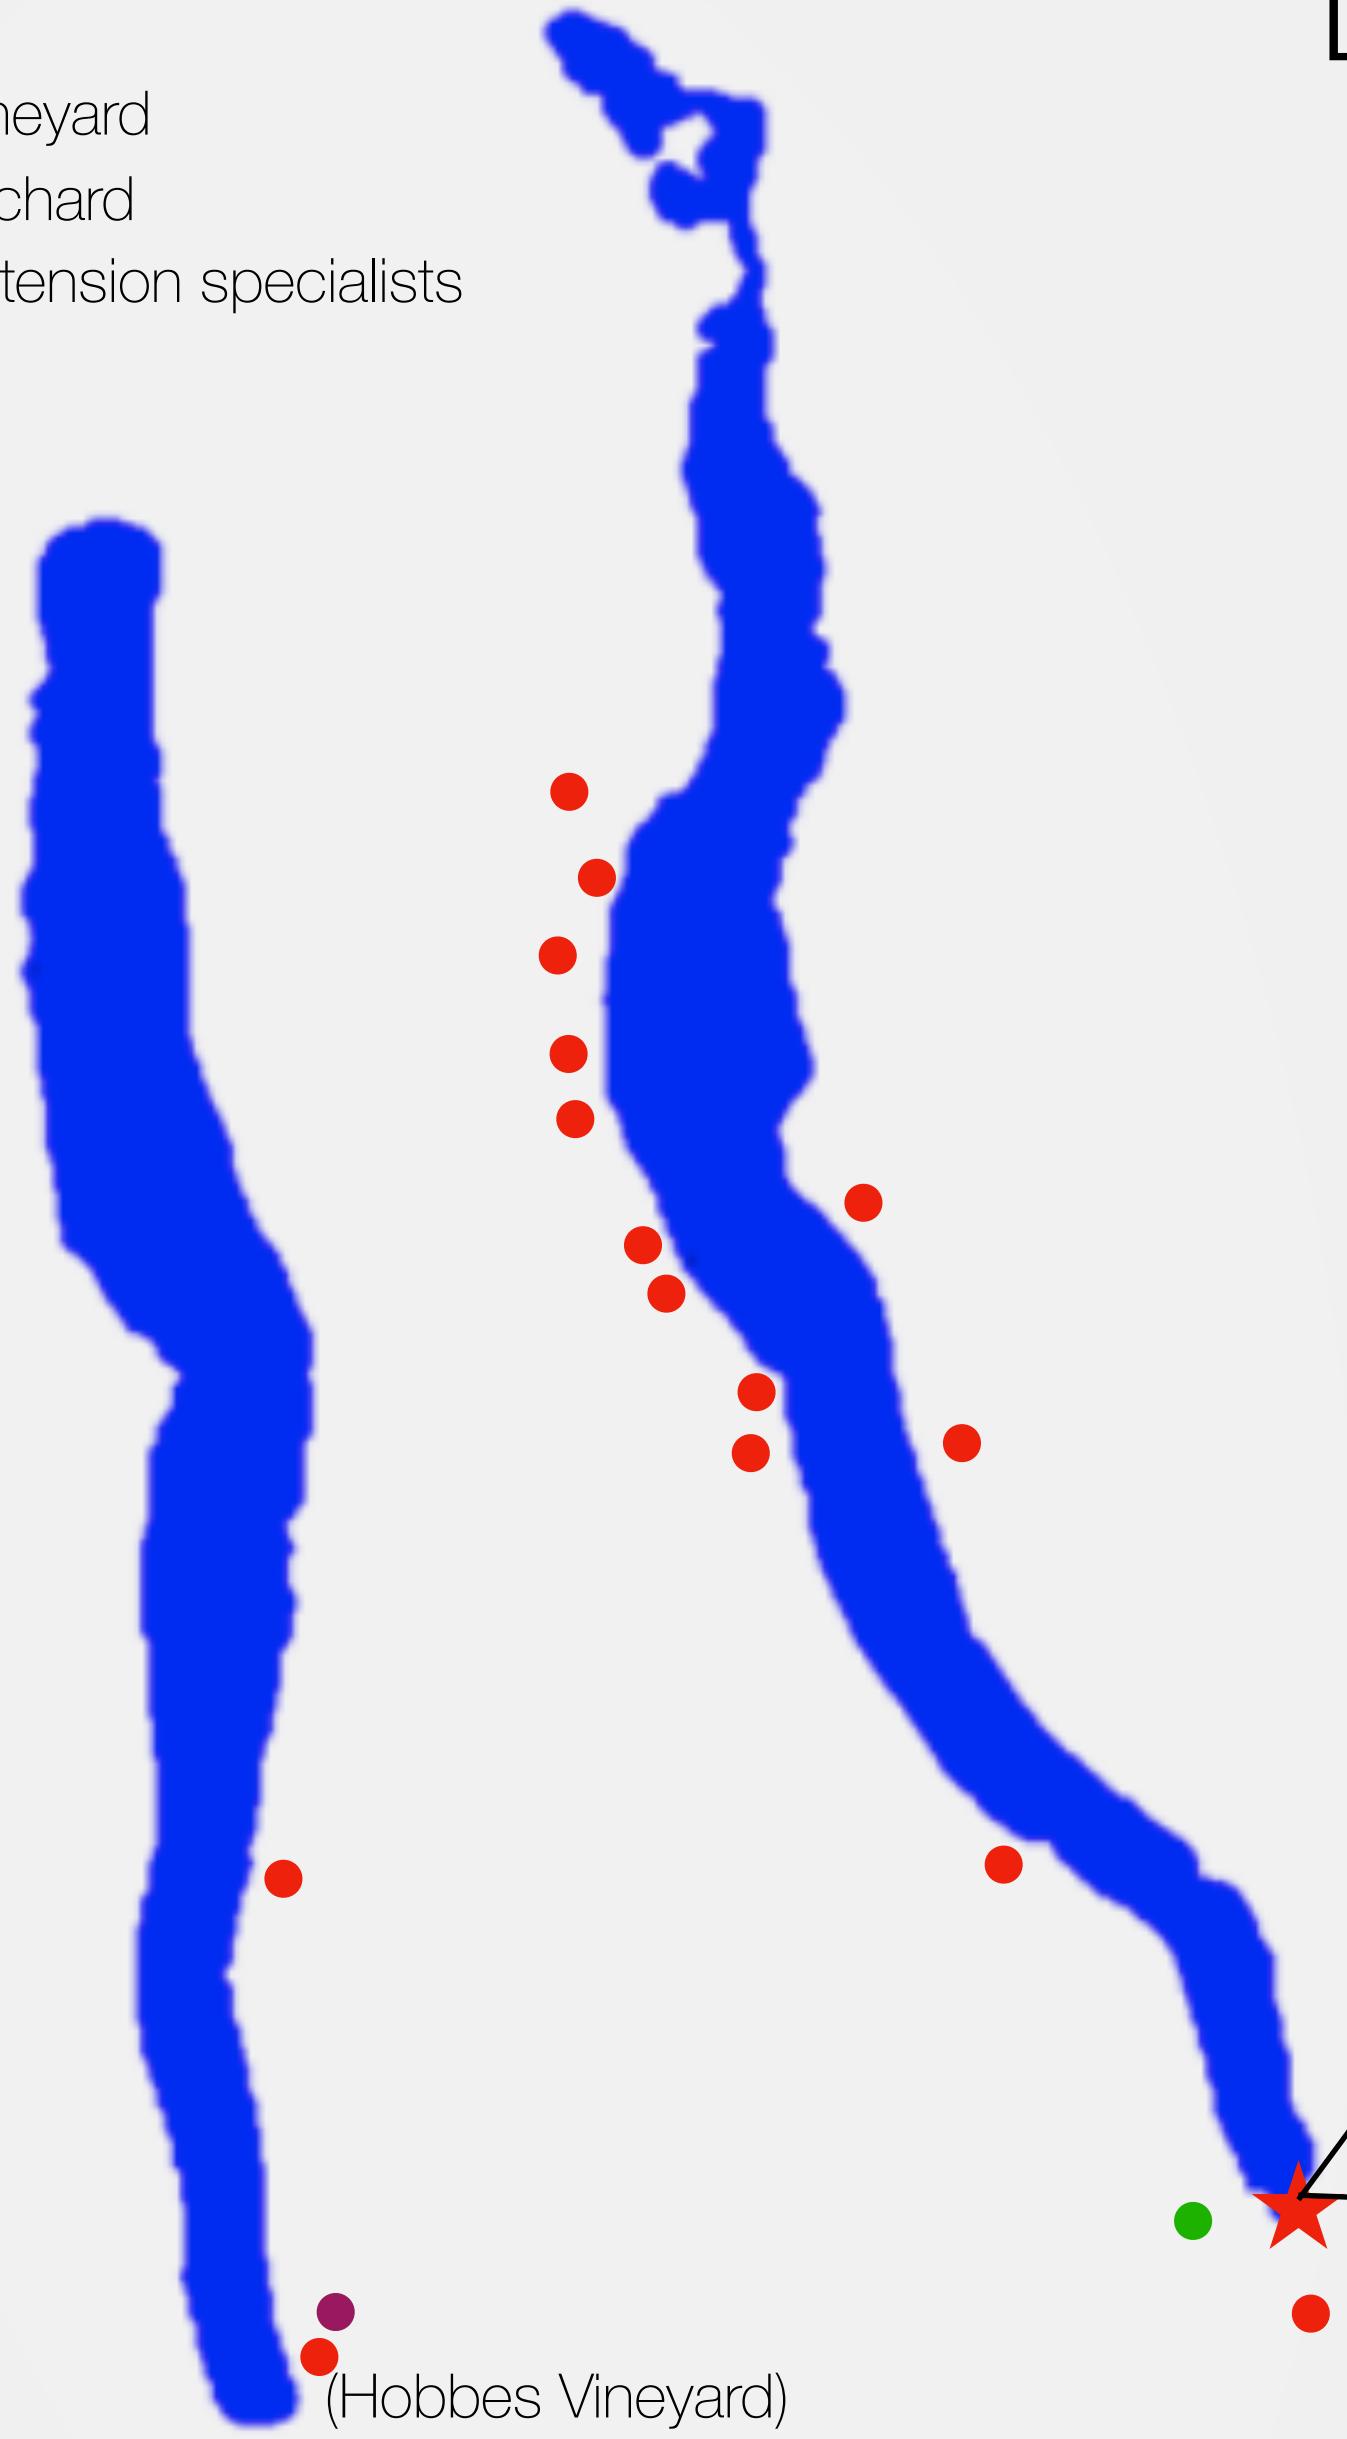

Orchard Owners

When your livelihood depends on this year's crop, you are not afforded the luxury of being forward-thinking.

Our only job is to make sure that we have clean grapes at this year's harvest. - Jon Cupp, Thirsty Owl

A dark, atmospheric photograph of a vineyard under a cloudy sky. The foreground shows rows of grapevines trained in a high-wire or canopy system. The vines are dense and green, growing in long, narrow strips between paths. In the background, more vineyard rows stretch towards a horizon where a few small, bright clouds are visible against a dark sky.

... unless you are forced to be.

97 percent adherence to
sustainability accreditation system

Principally concerned with soil
moisture to inform irrigation.

An eventual market, but one that
will require a slightly different
technology.
